

# Table of Model D Rife Device Frequency Codes and Actual Frequencies

## Notes:

1. Codes 14, 16, 17, 20 and 28 are reported to affect more microbes and conditions than all other frequencies combined.
2. The second most effective group of frequencies is reported to be 29, 42, 45, 48, 58 and 86. These are mainly used for parasites.
3. Frequencies in the range of 11 to 29 have been reported to produce the most rapid response.
4. Frequencies in the range of 60 to 85 are those that seem to occur naturally in the brain. It is believed that behavior can be influenced with harmonics of those same frequencies during behavior of the opposite type. For example, to reduce/eliminate anger, one might apply a frequency of 6.3 Hz (code # 71). See comments for these ranges.
5. Any good quality square wave generator that produces audio frequencies can be used for the actual frequencies listed in this document
6. These codes apply to Model D units such as the Astropulse, Electrospectrum, Electromagic, Naturetronics etc. The Model E units such as the Biosolutions etc. have some additional codes
